Rich Result Test:

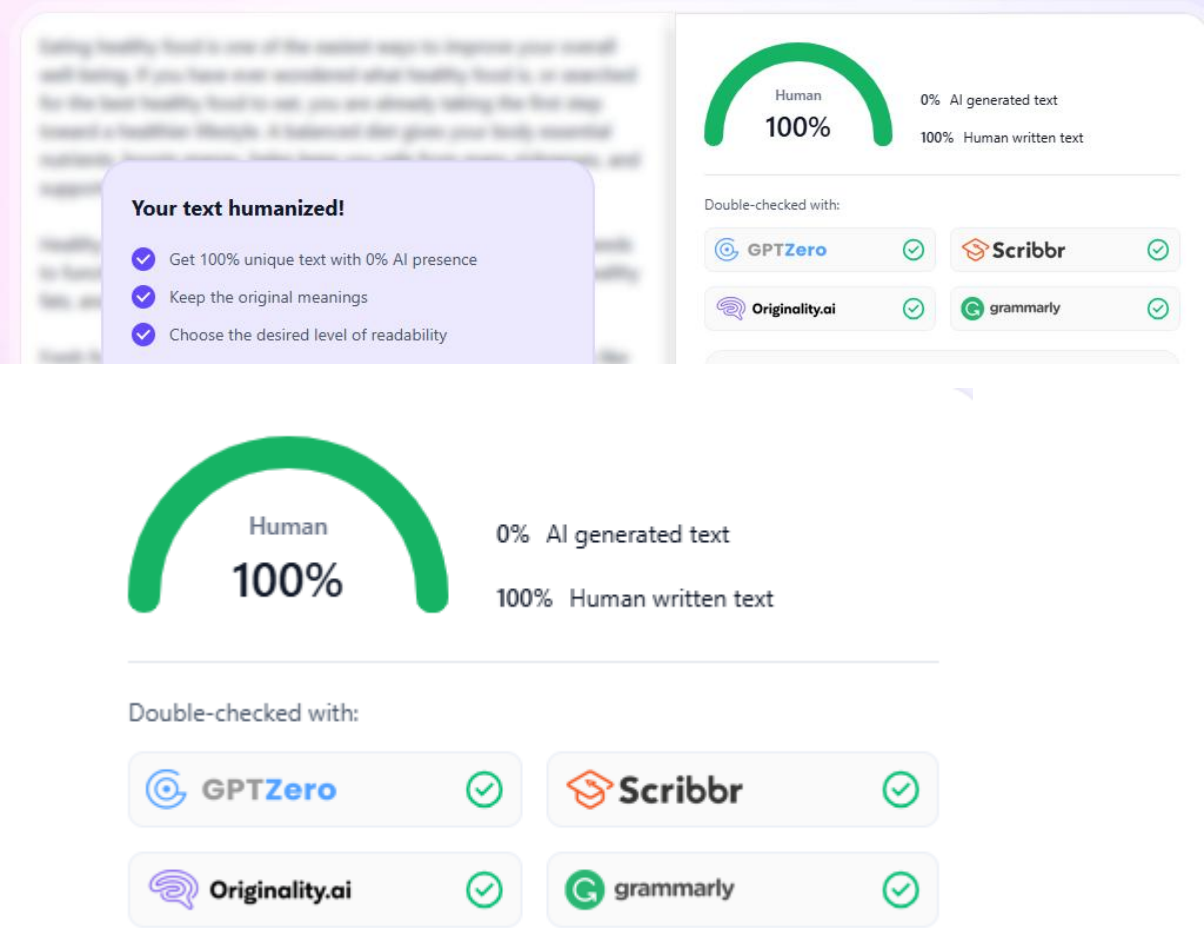

Open Graph (OG) Tags:

Step 6: Plagiarism Check and AI Detection

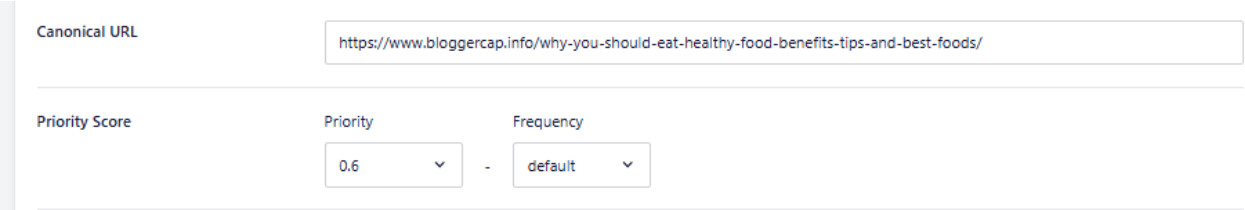

Tools used: https://textguard.ai/

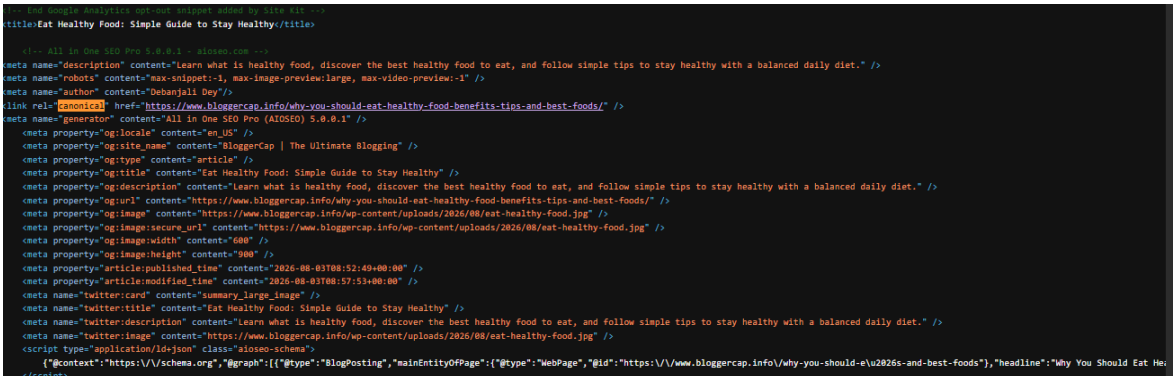

The report indicates that the content achieved a 0% AI-generated score, with the text being identified as 100% human-written. This result demonstrates that the article maintains a natural writing style, authentic tone, and human-like sentence structure, which are essential for reader engagement and search engine credibility.

Canonical URL and Sitemap

Canonical URL: https://www.bloggercap.info/why-you-should-eat-healthy-food-benefits-tips-and-best-foods/

The canonical URL tag has been correctly implemented to indicate the preferred version of the webpage to search engines. This improves SEO efficiency, strengthens search engine indexing, and enhances the page's chances of achieving better rankings in search results. Proper canonicalization also ensures consistency when the same content may be accessible through multiple URLs.

Conclusion: This assignment demonstrates the complete process of creating an SEO-optimized blog, from topic research and keyword analysis to content writing, image optimization, technical SEO, and plagiarism checking. The selected topic, Eat Healthy Food, was chosen based on current search trends and user interest. By using relevant keywords naturally and following SEO best practices, the blog is both search engine-friendly and valuable for readers. Overall, this project highlights the importance of combining quality content with effective SEO techniques to improve online visibility, attract the right audience, and provide useful information in an engaging way.
